

**DO NOT IRON NEW GARMENTS**  
without washing them first and  
ensure that linen is always rinsed  
thoroughly

**STARCHING ON REVERSE OF FABRIC**  
If you use starch, it should be  
sprayed on the reverse of the fabric

If you have any product problems or queries, do not  
return to the retailer but call our Customer Relations  
Team first for expert help and advice on:

**Rowenta**  
PERFECT PRO

**IMPORTANT  
POINTS TO NOTE**

### REMOVE SOLEPATE PROTECTOR

Before first use, remove the soleplate sticker

### BEFORE FIRST USE AND EACH TIME YOU BEGIN TO IRON

Allow the iron to steam for at least 1 minute away from linen to remove impurities

### NO CHEMICAL DE-SCALING

Do not use chemical de-scaling agents

### USE UNTREATED TAP WATER ONLY

Do not use scented, softened, boiled or filtered water

### ADJUST THERMOSTAT

Adjust the iron's thermostat and steam control ie less steam for low temperatures

### ANTI DRIP

If the temperature is too low, the iron cannot produce steam because of the anti-drip technology which prevents droplets of water leaking from the soleplate

### INTRA STEAM = PRESSURE + INTERVALS

This exclusive, innovative technology generates powerful steam pressure which enables the steam to penetrate quickly and deeply into the fabric. **The steam is emitted in frequent bursts rather than continuously.** This ensures a perfect balance of moistening and then drying the fabric. This function works automatically. You may hear a slight noise when the pressure is generated - **this is not a technical fault**
